DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "*m* represents 0 or 1" in the last line. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 and 3-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Takamiya (US 2004/0063036 A1)

The applied reference has a common assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in

the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

In [0262], Takamiya teaches a PS plate having a heat-sensitive layer consisting of two-layered structure. Both of those layers contain copolymer of ethyl methacrylate/isobutyl methacrylate/methacrylic acid, which is alkali-soluble (see [0254], [0255]) and Cyanine Dye A (present infrared absorbing dye). Therefore, Takamiya teaches present invention of claims 1, 3, and 4.

The upper layer of Takamiya's PS plate also contains tetrabutyl ammonium bromide, which is a compound capable of inhibiting the solubility of image forming material in developing solution (see [0167], [0171]). Therefore, the prior art teaches present invention of claim 5.
